

Maple, (Tatarian) Hot Wings

Acer tataricum 'GarAnn'

Height: 25 feet

Spread: 20 feet

Sunlight:

Hardiness Zone: 3a

Description:

A spectacular new addition for smaller home landscapes, this is a smaller accent tree that features blazing red hot seeds in late summer and fiery fall colors; tolerant of drought and alkaline conditions

Ornamental Features

Maple, (Tatarian) Hot Wings is primarily grown for its highly ornamental fruit. It features abundant showy cherry red samaras in late summer. It has dark green deciduous foliage. The lobed leaves turn outstanding shades of yellow, orange and red in the fall.

Landscape Attributes

Maple, (Tatarian) Hot Wings is a deciduous tree with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Maple, (Tatarian) Hot Wings is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening

Planting & Growing

Maple, (Tatarian) Hot Wings will grow to be about 25 feet tall at maturity, with a spread of 20 feet. It has a high canopy with a typical clearance of 6 feet from the ground, and is suitable for planting under power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a medium rate, and under ideal conditions can be expected to live for 70 years or more.

This tree does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
