

Spruce, (Norway) Weeping

Picea abies 'Pendula'

Height: 10 feet

Spread: 10 feet

Sunlight: ○

Hardiness Zone: 3a

Other Names: Norwegian Spruce

Description:

An artistic specimen or accent tree for the discerning landscape, featuring an erratic central leader and gracefully trailing branches that hang pendulously; narrow habit, but give adequate room for it to stand apart

Ornamental Features

Spruce, (Norway) Weeping is primarily valued in the landscape or garden for its highly ornamental weeping form. It has rich green evergreen foliage which emerges lime green in spring. The needles remain green throughout the winter.

Landscape Attributes

Spruce, (Norway) Weeping is an evergreen tree with a strong central leader and a rounded form and gracefully weeping branches. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance tree. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Spruce, (Norway) Weeping is recommended for the following landscape applications;

- Accent
- Vertical Accent

Planting & Growing

Spruce, (Norway) Weeping will grow to be about 10 feet tall at maturity, with a spread of 10 feet. It has a low canopy, and should not be planted underneath power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

This tree should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.

Special Attributes

The cones are 4 to 7 inches long, cylindrical hanging from branches against the dark green foliage. In some areas of the world spruce are considered drought tolerant, that depends on when does it rain. In the Pacific Northwest Desert evergreens need to be watered during the winter as well as the growing season. Our desert climate especially in late winter to early spring evergreens can suffer during next growing season. An easy way to remember check for dryness is on the holidays Halloween, Thanksgiving, New Year's Day, Valentines Day & Easter.
