

Rose (Climbing), Purple Splash
Rosa 'Purple Splash'

Height: 15 feet

Spread: 4 feet

Sunlight: ☉

Hardiness Zone: 4a

Group/Class: Climbing Rose

Description:

An extremely vigorous climber that produces spectacular purple blooms wildly striped in white; perfect for garden walls and trellises; excellent disease resistance; fertilize regularly.

Ornamental Features

Rose (Climbing), Purple Splash features showy clusters of lightly-scented purple flowers with gold eyes and white stripes along the branches from late spring to mid fall. The flowers are excellent for cutting. It has green deciduous foliage. The glossy oval compound leaves do not develop any appreciable fall color.

Landscape Attributes

Rose (Climbing), Purple Splash is a multi-stemmed deciduous woody vine with a twining and trailing habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This woody vine will require occasional maintenance and upkeep. Each spring, cut back all dead and two-year old canes to the ground, leaving only last year's growth standing. It is a good choice for attracting bees and butterflies to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spiny

Rose (Climbing), Purple Splash is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Rose (Climbing), Purple Splash will grow to be about 15 feet tall at maturity, with a spread of 4 feet. As a climbing rose, it can be leggy near the base and may be concealed by underplanting with lower-growing facer plants. It should be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This woody vine should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type, but has a definite preference for acidic soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
