Cherry (Flowering), Higan Pink Weeping

Prunus subhirtella 'Pendula Rosea'

Height: 20 feet

Spread: 20 feet

Sunlight: ○

Hardiness Zone: 5a

Other Names: Spring Cherry, Rosebud Cherry

Description:

One of the most memorable of all accent trees, this stunning beauty has a graceful, weeping habit of growth, with clouds of showy single pink flowers in spring before the leaves, colorful bark and good fall color; needs full sun and well-drained soil

Ornamental Features

Cherry (Flowering), Higan Pink Weeping is draped in stunning clusters of shell pink flowers along the branches in early spring, which emerge from distinctive pink flower buds before the leaves. It has dark green deciduous foliage. The pointy leaves turn yellow in fall. The fruits are showy black drupes displayed. The smooth dark red bark adds an interesting dimension to the landscape.

Landscape Attributes

Cherry (Flowering), Higan Pink Weeping is a deciduous tree with a rounded form and gracefully weeping branches. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds to your yard. It has no significant negative characteristics.

Cherry (Flowering), Higan Pink Weeping is recommended for the following landscape applications;

- Accent
- General Garden Use

Planting & Growing

Cherry (Flowering), Higan Pink Weeping will grow to be about 20 feet tall at maturity, with a spread of 20 feet. It has a high canopy with a typical clearance of 6 feet from the ground, and is suitable for planting under power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a medium rate, and under ideal conditions can be expected to live for 60 years or more.

This tree should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil pH, but grows best in rich soils. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. This is a selected variety of a species not originally from North America.

Special Attributes

The flowering cherry trees flower before they leaf out. generally don't produce fruit because the frost kills the blooms, but if they do fruit they would be a few 1/4 inch purple cherries mostly the pit.
