

Honeylocust, Street Keeper
Gleditsia triacanthos 'Draves'

Height: 40 feet

Spread: 20 feet

Sunlight: ☉

Hardiness Zone: 4a

Description:

A sturdy accent or street tree with ascending branches and a narrowly pyramidal growth habit; lush, deep green foliage with excellent yellow fall color; makes a real statement in the landscape; gets some long flat pods.

Ornamental Features

Honeylocust, Street Keeper has attractive dark green deciduous foliage which emerges light green in spring on a tree with a pyramidal habit of growth. The bipinnately compound leaves are highly ornamental and turn an outstanding yellow in the fall. However, the fruit can be messy in the landscape and may require occasional clean-up.

Landscape Attributes

Honeylocust, Street Keeper is an open deciduous tree with a distinctive and refined pyramidal form. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Honeylocust, Street Keeper is recommended for the following landscape applications;

- Accent
- Shade

Planting & Growing

Honeylocust, Street Keeper will grow to be about 40 feet tall at maturity, with a spread of 20 feet. It has a high canopy of foliage that sits well above the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a fast rate, and under ideal conditions can be expected to live for 70 years or more.

This tree should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.

Special Attributes

This Honeylocust is thornless. It is classified as nontoxic but deer resistant.
