

Arborvitae, Amber Gold (Jantar)

Thuja occidentalis 'Jantar'

Height: 15 feet

Spread: 3 feet

Sunlight: ○ ●

Hardiness Zone: 3a

Other Names: Jantar Arborvitae, Eastern White Cedar

Description:

A striking upright evergreen shrub for home landscapes, maintains a dense, compact shape without pruning, features stunning yellow foliage that turns amber-gold in winter; hardy and adaptable, best with adequate sun, protect from drying winds

Ornamental Features

Arborvitae, Amber Gold (Jantar) is a dwarf conifer which is primarily valued in the landscape for its rigidly columnar form. It has attractive chartreuse evergreen foliage which emerges yellow in spring. The scale-like sprays of foliage are highly ornamental and remain chartreuse throughout the winter.

Landscape Attributes

Arborvitae, Amber Gold (Jantar) is a dense multi-stemmed evergreen shrub with a narrowly upright and columnar growth habit. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Arborvitae, Amber Gold (Jantar) is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Arborvitae, Amber Gold (Jantar) will grow to be about 15 feet tall at maturity, with a spread of 3 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. This is a selection of a native North American species.

Special Attributes

Evergreens need to be watered during the winter. Our desert climate especially in late winter to early spring evergreens can suffer during next growing season. An easy way to remember check for dryness on the holidays Halloween, Thanksgiving, New Year's Day, Valentines Day & Easter.
