

Crape Myrtle, Petite Pinkie

Lagerstroemia indica 'Monkie'

Height: 5 feet

Spread: 4 feet

Sunlight:

Hardiness Zone: 6b

Other Names: Crape Myrtle, Crepe Myrtle

Description:

This beautiful and delicate looking dwarf crape myrtle presents profuse clusters of clear pink frilly blooms; a captivating focal point for the garden or border; also good for container planting

Ornamental Features

Crape Myrtle, Petite Pinkie is smothered in stunning panicles of pink frilly flowers at the ends of the branches from mid summer to early fall. It has attractive dark green deciduous foliage which emerges coppery-bronze in spring. The oval leaves are highly ornamental but do not develop any appreciable fall color.

Landscape Attributes

Crape Myrtle, Petite Pinkie is a dense multi-stemmed deciduous shrub with a mounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This shrub will require occasional maintenance and upkeep. Trim off the flower heads after they fade and die to encourage more blooms late into the season. It has no significant negative characteristics.

Crape Myrtle, Petite Pinkie is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Groundcover
- Container Planting

Planting & Growing

Crape Myrtle, Petite Pinkie will grow to be about 5 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Crape Myrtle, Petite Pinkie makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.

Special Attributes

In Eastern Washington & Oregon Crape Myrtles can have die back from our winters, depending on the winter. If it is a hard winter they can die completely so in the autumn put 4 inches of bark around their base going out to a 2 foot in diameter to protect the roots from dying. Crape Myrtles are one of the last things to leaf out in the spring, generally mid to late April or early May. If you are growing it in a container, be sure to protect it from cold temperatures and winds by taking it into a garage or shed with a window, don't forget to give it water once every 2 to 3 weeks.
