

## **Parrotia, Golden Belltower**

***Parrotia persica 'Chrishaven 1'***

Height: 30 feet

Spread: 12 feet

Sunlight: ○

Hardiness Zone: 5a

Other Names: Golden Bell Tower, Persian Ironwood

### **Description:**

A unique variety with a very neat, columnar habit of growth that persists as the tree matures; foliage emerges with hints of burgundy then matures to lime green; fall color is a gold to apricot with dark purple; very adaptable to diverse conditions

### **Ornamental Features**

Parrotia, Golden Belltower is primarily valued in the landscape for its rigidly columnar form. It has attractive lime green deciduous foliage which emerges burgundy in spring. The serrated oval leaves are highly ornamental and turn outstanding shades of gold, peach and deep purple in the fall. The mottled brown bark is extremely showy and adds significant winter interest.

### **Landscape Attributes**

Parrotia, Golden Belltower is a dense deciduous tree with a narrowly upright and columnar growth habit. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds and squirrels to your yard. It has no significant negative characteristics.

Parrotia, Golden Belltower is recommended for the following landscape applications;

- Accent
- Vertical Accent
- Hedges/Screening

### **Planting & Growing**

Parrotia, Golden Belltower will grow to be about 30 feet tall at maturity, with a spread of 12 feet. It has a low canopy with a typical clearance of 6 feet from the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a medium rate, and under ideal conditions can be expected to live for 60 years or more.

This tree should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
