

Forsythia, Lynwood Gold

Forsythia x intermedia 'Lynwood Gold'

Height: 10 feet

Spread: 10 feet

Sunlight:

Hardiness Zone: 5a

Other Names: Border Forsythia, Goldenbells

Description:

Heralding the arrival of spring, this popular shrub features prolific yellow flowers smothering the branches in early spring ahead of the leaves, the rest of the year rather unassuming; an upright cultivar with showy bright yellow flowers

Ornamental Features

Forsythia, Lynwood Gold is bathed in stunning gold bell-shaped flowers along the branches in early spring before the leaves. The flowers are excellent for cutting. It has forest green deciduous foliage. The serrated pointy leaves do not develop any appreciable fall color.

Landscape Attributes

Forsythia, Lynwood Gold is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Planting & Growing

Forsythia, Lynwood Gold will grow to be about 10 feet tall at maturity, with a spread of 10 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. To help this plant achieve its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
