

Cedar, Weeping Blue Atlas
Cedrus atlantica 'Glauca Pendula'

Height: 30 feet

Spread: 20 feet

Sunlight:

Hardiness Zone: 6a

Description:

A true accent piece, featuring a sprawling, horizontal habit of growth, certainly not for every landscape but very effective in the hands of a good designer; silvery-blue needles provide intense color all year round

Ornamental Features

Cedar, Weeping Blue Atlas is primarily valued in the landscape for its highly ornamental weeping form. It has attractive blue evergreen foliage. The needles are highly ornamental and remain blue throughout the winter. However, the fruit can be messy in the landscape and may require occasional clean-up.

Landscape Attributes

Cedar, Weeping Blue Atlas is an open evergreen tree with a rounded form and gracefully weeping branches. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This tree will require occasional maintenance and upkeep, and can be pruned at anytime. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Cedar, Weeping Blue Atlas is recommended for the following landscape applications;

- Accent
- Vertical Accent

Planting & Growing

Cedar, Weeping Blue Atlas will grow to be about 30 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live to a ripe old age of 100 years or more; think of this as a heritage tree for future generations!

This tree does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.

Special Attributes

These evergreens do shed inside foliage in the autumn or spring. Cedars have male and female reproductive parts on one tree. 1 3/4-2 inch Male flowers are catkins or pollen cones and are on lower branches in autumn. Blue female cones grow upright on higher branches getting 3 3/4 inches, taking 2 years to mature. Evergreens need to be watered during the winter. Our desert climate especially in late winter to early spring evergreens can suffer during next growing season. An easy way to remember check for dryness on the holidays Halloween, Thanksgiving, New Year's Day, Valentines Day & Easter.
