

Honeylocust, Skyline
Gleditsia triacanthos 'Skycole'

Height: 45 feet

Spread: 35 feet

Sunlight: 

Hardiness Zone: 4a

Description:

A very popular shade tree, valued for its delicate, ferny appearance which casts a dappled shade below, notably more upright habit of growth than the species, taller than wide; tolerant of adverse growing conditions, seedless, makes a great street tree

Ornamental Features

Honeylocust, Skyline has dark green deciduous foliage on a tree with a pyramidal habit of growth. The pinnately compound leaves turn an outstanding gold in the fall.

Landscape Attributes

Honeylocust, Skyline is an open deciduous tree with a distinctive and refined pyramidal form. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Honeylocust, Skyline is recommended for the following landscape applications;

- Shade

Planting & Growing

Honeylocust, Skyline will grow to be about 45 feet tall at maturity, with a spread of 35 feet. It has a high canopy of foliage that sits well above the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a fast rate, and under ideal conditions can be expected to live for 70 years or more.

This tree should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.

Special Attributes

This Honeylocust is thorn-less and seedless. It is classified as nontoxic but deer resistant.
