

Juniper, Skyrocket

Juniperus scopulorum 'Skyrocket'

Height: 15 feet

Spread: 4 feet

Sunlight: ○

Hardiness Zone: 3a

Other Names: Colorado Redcedar

Description:

A narrow, rigid tall evergreen shrub, with soft blue-green needle-like foliage all season long; use with caution, can be rather abrupt in the landscape, makes a almost formal tall evergreen hedge when planted in a row

Ornamental Features

Juniper, Skyrocket is a dwarf conifer which is primarily valued in the landscape for its rigidly columnar form. It has attractive powder blue evergreen foliage. The scale-like sprays of foliage are highly ornamental and remain powder blue throughout the winter. It produces silvery blue berries from late spring to late winter.

Landscape Attributes

Juniper, Skyrocket is a multi-stemmed evergreen shrub with a narrowly upright and columnar growth habit. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Juniper, Skyrocket is recommended for the following landscape applications;

- Accent
- Vertical Accent
- Hedges/Screening
- General Garden Use

Planting & Growing

Juniper, Skyrocket will grow to be about 15 feet tall at maturity, with a spread of 4 feet. It tends to be a little leggy, with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 70 years or more.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.

Special Attribute

Evergreens need to be watered during the winter. Our desert climate especially in late winter to early spring evergreens can suffer during next growing season. An easy way to remember check for dryness on the holidays Halloween, Thanksgiving, New Year's Day, Valentines Day & Easter.
