

Cypress, Leyland

Cupressocyparis x leylandii

Height: 40 feet

Spread: 20 feet

Sunlight: ○

Hardiness Zone: 5b

Description:

This lovely cypress presents interesting tiny sea-green foliage that is both fine and dense; pyramidal form has a slightly relaxed weeping habit that makes a beautiful visual impact as a border or accent planting; fast growing

Ornamental Features

Cypress, Leyland is primarily valued in the landscape for its distinctively pyramidal habit of growth. It has attractive bluish-green evergreen foliage. The tiny scale-like sprays of foliage are highly ornamental and remain bluish-green throughout the winter.

Landscape Attributes

Cypress, Leyland is a dense evergreen tree with a distinctive and refined pyramidal form. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance tree. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Cypress, Leyland is recommended for the following landscape applications;

- Accent
- Vertical Accent
- Mass Planting
- Hedges/Screening

Planting & Growing

Cypress, Leyland will grow to be about 40 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and should not be planted underneath power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 60 years or more.

This tree should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type, but has a definite preference for acidic soils. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.

Special Attributes

Cupressocyparis are classified as Toxic to people, pets & livestock it is not commonly ingested, it must taste really bad.
