

Privet, Cheyenne Ligustrum vulgare 'Cheyenne'

Hardiness Zone: 4a

Other Names: European Privet

Description:

A hardy large shrub for use in trimmed hedges, takes pruning exceptionally well; densely branched, interesting flowers (if not pruned) followed by black berries in fall; easy to grow, handles polluted city conditions well

Ornamental Features

Privet, Cheyenne has panicles of lightly-scented white flowers hanging below the branches from late spring to early summer. It has dark green deciduous foliage. The glossy narrow leaves do not develop any appreciable fall color.

Landscape Attributes

Privet, Cheyenne is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This shrub will require occasional maintenance and upkeep, and can be pruned at anytime. It has no significant negative characteristics.

Privet, Cheyenne is recommended for the following landscape applications;

- Hedges/Screening

Planting & Growing

Privet, Cheyenne will grow to be about 15 feet tall at maturity, with a spread of 10 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
