

Pine, Columnar Eastern White

Pinus strobus 'Fastigiata'

Height: 30 feet

Spread: 10 feet

Sunlight: ○

Hardiness Zone: 3b

Other Names: Eastern White Pine

Description:

A highly attractive narrowly columnar tree with silky smooth long needles which give a fuzzy appearance from a distance; can windburn in exposed locations, best grown in some shelter, but needs full sun; one of the best pine trees for smaller landscapes

Ornamental Features

Pine, Columnar Eastern White is primarily valued in the landscape for its rigidly columnar form. It has rich green evergreen foliage. The needles remain green throughout the winter. The furrowed gray bark adds an interesting dimension to the landscape.

Landscape Attributes

Pine, Columnar Eastern White is an evergreen tree with a strong central leader and a narrowly upright and columnar growth habit. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This tree will require occasional maintenance and upkeep. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Pine, Columnar Eastern White is recommended for the following landscape applications;

- Accent
- Vertical Accent

Planting & Growing

Pine, Columnar Eastern White will grow to be about 30 feet tall at maturity, with a spread of 10 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live to a ripe old age of 100 years or more; think of this as a heritage tree for future generations!

This tree should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type, but has a definite preference for acidic soils, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. This is a selection of a native North American species.

Special Attributes

Cones are oval shaped 4 to 8 inches long. They are green turning brown and found in groups of 2 to 4. In some areas of the world pine are considered drought tolerant, that depends on when does it rain. If it doesn't rain during the growing season more than 4 inches on a monthly basis it will need to be watered. In the Pacific Northwest Desert evergreens need to be watered during the winter as well as the growing season. Our desert climate especially in late winter to early spring evergreens can suffer during next growing season. An easy way to remember check for dryness is on the holidays Halloween, Thanksgiving, New Year's Day, Valentines Day & Easter
