Cherry, Montmorency (Semi Dwarf)

Prunus 'Montmorency'

Height: 15 feet

Spread: 15 feet

Sunlight: ○

Hardiness Zone: 4a

Other Names: Sour Cherry

Description:

A popular commercial fruit tree, the ideal size for backyard orchards; showy white flowers in spring followed by loads of bright red sour cherries in mid summer, excellent for pies and jam; needs full sun and well-drained soil, self-pollinating

Edible Qualities

Cherry, Montmorency (Semi Dwarf) is a small tree that is commonly grown for its edible qualities. It produces cherry red round fruit (technically 'drupes') with yellow flesh which are usually ready for picking in mid summer. Note that the fruits have hard inedible pits inside which must be removed before eating or processing. The fruits have a sour taste and a firm texture.

The fruit are most often used in the following ways:

- Cooking
- Baking
- Preserves
- Juice-Making

Features & Attributes

Cherry, Montmorency (Semi Dwarf) is clothed in stunning clusters of fragrant white flowers along the branches in mid spring before the leaves. It has dark green deciduous foliage. The pointy leaves turn an outstanding orange in the fall. The fruits are showy cherry red drupes carried in abundance in mid summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up. The smooth dark red bark adds an interesting dimension to the landscape.

This is a deciduous tree with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This plant will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Insects

Aside from its primary use as an edible, Cherry, Montmorency (Semi Dwarf) is sutiable for the following landscape applications;

- Accent
- Orchard/Edible Landscaping

Planting & Growing

Cherry, Montmorency (Semi Dwarf) will grow to be about 15 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years. This is a self-pollinating variety, so it doesn't require a second plant nearby to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.

Special Attributes

Growing fruit trees is a very tasty and rewarding food source, it does take time, energy and devotion to maintain so if you are up for the task. Cherry trees are a fruit that needs a regular spray program here in the Columbia Basin see our website, go to products then fruit trees click on Cherries for our care guide
