Height: 60 feet

Spread: 45 feet

Sunlight: ○

Hardiness Zone: 4a

Other Names: London Planetree

Description:

Selected for its uniform, upright pyramidal habit and attractive foliage; densely branched with a moderate growth rate; beautiful white and brown mottled bark; best in larger landscapes; very resistant to frost cracking and disease

Ornamental Features

Sycamore, Exclamation has forest green deciduous foliage on a tree with a pyramidal habit of growth. The large serrated lobed leaves turn coppery-bronze in fall. The mottled silver bark is extremely showy and adds significant winter interest.

Landscape Attributes

Sycamore, Exclamation is a deciduous tree with a distinctive and refined pyramidal form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This tree will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting squirrels to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy

Sycamore, Exclamation is recommended for the following landscape applications;

- Shade

JOB'S NURSERY, LLC
GROWING SINCE 1940

Planting & Growing

Sycamore, Exclamation will grow to be about 60 feet tall at maturity, with a spread of 45 feet. It has a high canopy of foliage that sits well above the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a fast rate, and under ideal conditions can be expected to live to a ripe old age of 100 years or more; think of this as a heritage tree for future generations!

This tree should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.

Clean up Rating (1-5) 1=least effort 5=most effort

Clean Up Rating (5): Seeds are 1/2 inch surrounded by fuzz making them 1 1/2 to 2 inches they start dropping in spring. Clean up for seeds, leaves and peeling bark blow or rake onto lawn and mow or bag them. Strong winds can cause small branches to fall. Clean up for branches is to pick them up and bag them. We recommend this as a country or a pasture tree, Not a lawn tree. It is very tolerant of adverse conditions and an excellent for live stock. Place where the exfoliating bark and seed balls are not a problem.
