Description:

This stand-out variety produces dazzling white leaves with blue-green edges and chartreuse-gold variegation; white scapes with lavender flowers in mid to late summer; provides beautiful texture and color to the garden

Ornamental Features

Hosta, Vulcan features dainty spikes of lavender tubular flowers rising above the foliage from mid to late summer. Its attractive textured pointy leaves remain white in color with distinctive bluish-green edges and tinges of chartreuse throughout the season.

Landscape Attributes

Hosta, Vulcan is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It has no significant negative characteristics.

Hosta, Vulcan is recommended for the following landscape applications;

Planting & Growing

Hosta, Vulcan will grow to be about 18 inches tall at maturity extending to 24 inches tall with the flowers, with a spread of 3 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 30 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. To help this plant achieve its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
