

Antennaria, Cat Toes

Antennaria dioica

Height: 6 inches

Spread: 12 inches

Sunlight: ☉ ●

Hardiness Zone: 3a

Other Names: Pussy Toes, Pussy-Toes

Description:

A low growing selection perfect for groundcover, borders or garden beds; clusters of silvery-white flowers sit atop grey-green foliage; this variety requires little maintenance

Ornamental Features

Antennaria, Cat Toes's attractive tiny tomentose narrow leaves remain grayish green in color with hints of silver throughout the year on a plant with an upright spreading habit of growth. It has balls of white flowers at the ends of the stems from late spring to early summer, which emerge from distinctive silver flower buds, and which are interesting on close inspection.

Landscape Attributes

Antennaria, Cat Toes is an herbaceous evergreen perennial with an upright spreading habit of growth. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and should not require much pruning, except when necessary, such as to remove dieback. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Antennaria, Cat Toes is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Groundcover
- Naturalizing And Woodland Gardens

Planting & Growing

Antennaria, Cat Toes will grow to be only 6 inches tall at maturity, with a spread of 12 inches. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It does best in average conditions that are neither too wet nor too dry, and is very intolerant of standing water. To help this plant achieve its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil pH, but grows best in poor soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is native to parts of North America. It can be propagated by division.
