Plant Height: 18 inches

Flower Height: 24 inches

Spread: 18 inches

Sunlight: ○ ◐

Hardiness Zone: 3a

Other Names: Little Bluestem

Description:

This shorter form selection presents a sturdy columnar clump of striking silver-blue stems that won't flop over; airy, purplish-bronze colored plumes appear in late summer; silvery seed heads in fall; perfect as a landscape accent, or along borders

Ornamental Features

Little Blue Stem Grass, Jazz has masses of beautiful plumes of purple flowers with coppery-bronze overtones rising above the foliage in late summer, which are most effective when planted in groupings. Its attractive grassy leaves are powder blue in color. As an added bonus, the foliage turns gorgeous shades of coppery-bronze and in the fall. The silver seed heads are carried on showy plumes displayed in abundance from early fall to late winter. The silvery blue stems are very colorful and add to the overall interest of the plant.

Landscape Attributes

Little Blue Stem Grass, Jazz is an herbaceous perennial grass with an upright spreading habit of growth. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cut back to the ground in late winter before active growth resumes. It has no significant negative characteristics.

Little Blue Stem Grass, Jazz is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

Planting & Growing

Little Blue Stem Grass, Jazz will grow to be about 18 inches tall at maturity extending to 24 inches tall with the flowers, with a spread of 18 inches. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. To help this plant achive its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
