

Nectarine, Independence (Semi Dwarf)

Prunus persica var. *nucipersica*
'Independence'

Height: 15 feet

Spread: 15 feet

Sunlight: 

Hardiness Zone: 5a

Description:

An exceptional selection, producing large, freestone nectarines with smooth red skin, and tangy, sweet, pale yellow flesh; winter hardy and early ripening; susceptible to late spring freezes, needs full sun and well-drained soil

Edible Qualities

Nectarine, Independence (Semi Dwarf) is a small tree that is commonly grown for its edible qualities. It produces large red round fruit (technically 'drupes') with hints of yellow and buttery yellow flesh which are usually ready for picking from early to mid summer. Note that the fruits have hard inedible pits inside which must be removed before eating or processing. The fruits have a sweet taste with a firm texture and a pleasant fragrance.

The fruit are most often used in the following ways:

- Fresh Eating
- Preserves
- Canning

Features & Attributes

Nectarine, Independence (Semi Dwarf) is draped in stunning clusters of fragrant pink flowers along the branches in early spring, which emerge from distinctive rose flower buds before the leaves. It has dark green deciduous foliage. The narrow leaves turn yellow in fall. The fruits are showy red drupes with hints of yellow, which are carried in abundance from early to mid summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

This is a deciduous tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a high maintenance plant that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy

Aside from its primary use as an edible, Nectarine, Independence (Semi Dwarf) is suitable for the following landscape applications;

- Accent
- Orchard/Edible Landscaping

Planting & Growing

Nectarine, Independence (Semi Dwarf) will grow to be about 15 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more. This is a self-pollinating variety, so it doesn't require a second plant nearby to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. This is a selected variety of a species not originally from North America.

Special Attributes

Growing fruit trees is a very tasty and rewarding food source, it does take time, energy and devotion to maintain so if you are up for the task. Nectarine & Peach trees are a fruit that takes less care here in the Columbia Basin see our website, go to products then fruit trees click on Peaches & Nectarines for our care guide
