Japanese Maple, Tamukeyama

Acer palmatum 'Tamukeyama'

Height: 10 feet

Spread: 12 feet

Sunlight: ◐

Hardiness Zone: 5b

Description:

An incredibly artistic accent plant for the garden, featuring lacy foliage that emerges a beautiful crimson-red and fades to a purple-green in summer, turning stunning fiery shades of color in fall. Needs afternoon shade and wind protection.

Ornamental Features

Japanese Maple, Tamukeyama is primarily valued in the landscape or garden for its broadly spreading habit of growth. It features subtle corymbs of red flowers rising above the foliage in mid spring before the leaves. It has attractive burgundy deciduous foliage which emerges crimson in spring. The deeply cut ferny palmate leaves are highly ornamental and turn an outstanding red in the fall. The rough gray bark and red branches add an interesting dimension to the landscape.

Landscape Attributes

Japanese Maple, Tamukeyama is an open deciduous tree with a strong central leader and a ground-hugging habit of growth. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance tree, and can be pruned at anytime. It has no significant negative characteristics.

Japanese Maple, Tamukeyama is recommended for the following landscape applications;

Planting & Growing

Japanese Maple, Tamukeyama will grow to be about 10 feet tall at maturity, with a spread of 12 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 80 years or more.

This tree should be grown in a location with partial shade and which is shaded from the hot afternoon sun. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Clean up Rating (1-5) 1=least effort 5=most effort

Clean Up Rating (1): Japanese maples generally produce few to no seeds called samaras, which are commonly referred to as helicopters 1/2 to 3/4 of an inch long, and approximately 1/4 inch wide. Growing in pairs. Clean up is blowing or raking samaras and leaves onto the lawn and mow or bag.
