

**Redbud, Lavender Twist Weeping**  
*Cercis canadensis 'Covey'*

Height: 7 feet

Spread: 8 feet

Sunlight: ○ ●

Hardiness Zone: 4b

Other Names: Eastern Redbud, Judas Tree, Love Tree

**Description:**

A stunning accent with gracefully arching and weeping branches, a twisted trunk and very showy pink to purple flowers in early spring, curious heart-shaped leaves; an incredible garden accent, especially when in bloom. Performs best with wind protection.

**Ornamental Features**

Redbud, Lavender Twist Weeping has rose pea-like flowers along the branches from early to mid spring, which emerge from distinctive fuchsia flower buds before the leaves. It has forest green deciduous foliage which emerges burgundy in spring. The heart-shaped leaves turn buttery yellow in fall. The twisted dark brown bark is extremely showy and adds significant winter interest.

**Landscape Attributes**

Redbud, Lavender Twist Weeping is a multi-stemmed deciduous shrub with a rounded form and gracefully weeping branches. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Redbud, Lavender Twist Weeping is recommended for the following landscape applications;

- Accent
- General Garden Use

### **Planting & Growing**

Redbud, Lavender Twist Weeping will grow to be about 7 feet tall at maturity, with a spread of 8 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.

### **Special Attributes**

Redbud trees develop some flat pod that is 2 to 3 inches long. Generally dropping in the autumn.
