Echinacea, Peacock Coneflower

Echinacea 'Peacock'

Height: 18 inches

Spread: 24 inches

Sunlight: ○ ◐

Hardiness Zone: 4a

Group/Class: Butterfly Series

Description:

A strong yet compact plant, presenting large, coral pink blooms with coppery-orange center cones; ideal for borders, containers or fresh-cut flower arrangements; attracts beautiful butterflies to the garden; use in naturalized areas

Ornamental Features

Echinacea, Peacock Coneflower has masses of beautiful lightly-scented coral-pink daisy flowers with pink overtones and coppery-bronze eyes at the ends of the stems from early summer to early fall, which are most effective when planted in groupings. The flowers are excellent for cutting. Its pointy leaves remain green in color throughout the season.

Landscape Attributes

Echinacea, Peacock Coneflower is an herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Echinacea, Peacock Coneflower is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

JOB'S NURSERY, LLC
GROWING SINCE 1940

Planting & Growing

Echinacea, Peacock Coneflower will grow to be about 15 inches tall at maturity, with a spread of 24 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. To help this plant achive its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Echinacea, Peacock Coneflower is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.

Special Attributes

Echinacea or Coneflower will need to be watered during the growing season, in the Lower Columbia Basin there isn't enough rainfall during the growing season. The amount of water and regularity depends on the your soil, the wind and the heat variables at different times.
