

Pine, (White) Angel Falls Weeping

Pinus strobus 'Angel Falls'

Height: 15 feet

Spread: 8 feet

Sunlight: ☉

Hardiness Zone: 3a

Other Names: Eastern White Pine

Description:

This is a refined version of the popular weeping white pine; extraordinary long narrow blue-green needles, a strong weeping habit, and a profusion of buds and branches make this one a superior pick as a garden accent

Ornamental Features

Pine, (White) Angel Falls Weeping is primarily valued in the landscape for its highly ornamental weeping form. It has attractive bluish-green evergreen foliage. The needles are highly ornamental and remain bluish-green throughout the winter.

Landscape Attributes

Pine, (White) Angel Falls Weeping is a multi-stemmed evergreen tree with a rounded form and gracefully weeping branches. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This tree will require occasional maintenance and upkeep. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Pine, (White) Angel Falls Weeping is recommended for the following landscape applications;

- Accent
- General Garden Use

Planting & Growing

Pine, (White) Angel Falls Weeping will grow to be about 15 feet tall at maturity, with a spread of 8 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This tree should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type, but has a definite preference for acidic soils, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. This is a selection of a native North American species.

Special Attributes

Cones are oval shaped 4 to 8 inches long. They are green turning brown and found in groups of 2 to 4. In some areas of the world pine are considered drought tolerant, that depends on when does it rain. If it doesn't rain during the growing season more than 4 inches on a monthly basis it will need to be watered. In the Pacific Northwest Desert evergreens need to be watered during the winter as well as the growing season. Our desert climate especially in late winter to early spring evergreens can suffer during next growing season. An easy way to remember check for dryness is on the holidays Halloween, Thanksgiving, New Year's Day, Valentines Day & Easter
