Juniper, Calgary Carpet

Juniperus sabina 'Calgary Carpet'

Height: 9 inches

Spread: 10 feet

Sunlight: ○ ◐

Hardiness Zone: 3a

Description:

A highly regarded groundcover evergreen for home landscape use; very attractive and soft light green foliage, low growing and wide spreading with gently arching branches; excellent in massing and groupings or as a groundcover

Ornamental Features

Juniper, Calgary Carpet is a dwarf conifer which is primarily valued in the garden for its broadly spreading habit of growth. It has lime green evergreen foliage. The scale-like sprays of foliage remain lime green throughout the winter. It produces blue berries from late spring to late winter.

Landscape Attributes

Juniper, Calgary Carpet is a dense multi-stemmed evergreen shrub with a ground-hugging habit of growth. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Juniper, Calgary Carpet is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

Planting & Growing

Juniper, Calgary Carpet will grow to be about 9 inches tall at maturity, with a spread of 10 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.

Clean up Rating (1-5) 1=least effort 5=most effort

Clean Up Ratings (2): Interior foliage can be raked up and bagged and seeds can be blown or raked onto the lawn and mowed or bagged. In the autumn few to some small cones can fall and can shed some inner foliage. Evergreens need to be watered during the winter. Our desert climate especially in late winter to early spring evergreens can suffer during next growing season. An easy way to remember check for dryness on the holidays Halloween, Thanksgiving, New Year's Day, Valentines Day & Easter. During the growing season maintain regular deep watering.
